

GENERAL CONTRACTING

**WASTE TREATMENT,
INERT PLANTS AND
ENVIRONMENTAL
CONSULTING**

Rimac Technology SA is a company specialized in **design, construction, rental and technical assistance** of treatment and recovery plants and in **consulting service and environmental engineering**.

We take care of the **design, construction, marketing, rental and assistance technique of machinery and systems for the treatment of inert materials and waste**: materials for construction and demolition, excavated earth and rocks, asphalt, sand, gravel, steel mill slag, plastic, paper, wood, glass, etc.

We also provide **environmental consultancy** with feasibility studies, authorization procedures, V.I.A., V.A.S., remediation of contaminated sites, training courses, assistance and management of practices.

Rimac Technology SA was born from the acquisition of technical personnel and know-how of the companies of the Rimac group, founded in 1997, and by Migliorati Ambiente s.a.s. established in 2007. An ambitious project where time has given reason: our company now collaborates with realities throughout Europe.

KNOW-HOW

Among its references, Rimac Technology SA can count on important national and international projects. All the resources, equipment and the specific expertise gained over time and shown on-site and throughout the construction sites we worked in, allow us to meet the customers' needs in the field of environmental engineering and material management.

PERFORMANCE

From the design to the manufacturing of fixed and mobile treatment and recovery plants, up to environmental consulting, we find the right solution for any kind of project, guaranteeing our customers a careful and accurate service.

ENVIRONMENTAL ENGINEERING

Rimac Technology SA employs cutting-edge engineering and scientific techniques and is able to execute orders from the designing to the executive phase. Our offer covers a wide range of services, such as feasibility studies, authorization procedures, EIA, SEA, projects and contaminated site remediation, as well as technical and regulatory consulting.

Plants for the treatment of **materials inert**, ferrous and non-ferrous and waste recovery.

Our plants for **treatment, disposal and recovery of materials and waste** are the result of the best technology on the market. The goal is to properly treat aggregates and waste and, where possible, recover them to give them a **second life**, for example for the construction of substrates in the construction sector.

Our machine park includes jaw crushing plants, hammer crushing plants, flat and star screening, conveyor belts. All our machines can be made fixed, wheeled or tracked. They are equipped with sophisticated control devices, to face any treatment, recovery and / or disposal activity.

PARK OF MACHINES FOR TREATMENT AND RECOVERY

MOBY Series

jaw crushing machines

MOBY MASTER Series

hammer crushing machines

MOBY VAI Series

Screening machines

For all the features ask for the technical data sheet.

ENVIRONMENTAL CONSULTING AND WASTE MANAGEMENT

Rimac Technology SA follows all the phases of the **environmental and waste management**, in accordance with the legislation. We offer any advice: **operational, administrative and technical - normative** supporting the customer in all his needs.

Are you looking for a **trusted partner** who will help you fulfill the administrative and bureaucratic obligations on the **environmental subject**, obtain authorizations, verify the requisites necessary to start activities and interventions and undertake a **correct waste monitoring and control policy**?
Our technical staff is at your disposal.

ASSISTANCE AND SPARE PARTS

RIMAC TECHNOLOGY SA has an in-house workshop for the maintenance and overhaul of machinery and crushing/screening plants, guaranteeing its customers professional and specialized assistance.

RENTAL

RIMAC TECHNOLOGY SA has a wide range of RENTAL crushing and screening machines available either directly or through its partners.

4 TECHNICAL MANAGEMENT

Our Services

COMMUNICATION CONDUCT

of recovery and / or disposal campaigns with an authorized mobile system.

DESIGN

construction and authorization interventions of special waste recovery plants, landfills, ecological islands and composting plants.

INVESTIGATIONS

of characterization and risk analysis for contaminated sites.

DESIGN

of remediation interventions on contaminated sites.

EXECUTION

of remediation interventions with innovative technologies and waste treatment activities.

CENSUS AND PLANNING

of remediation interventions of asbestos or other dangerous substances.

EVALUATION

of environmental impact and other strategic analyzes.

CORPORATE TRAINING COURSES

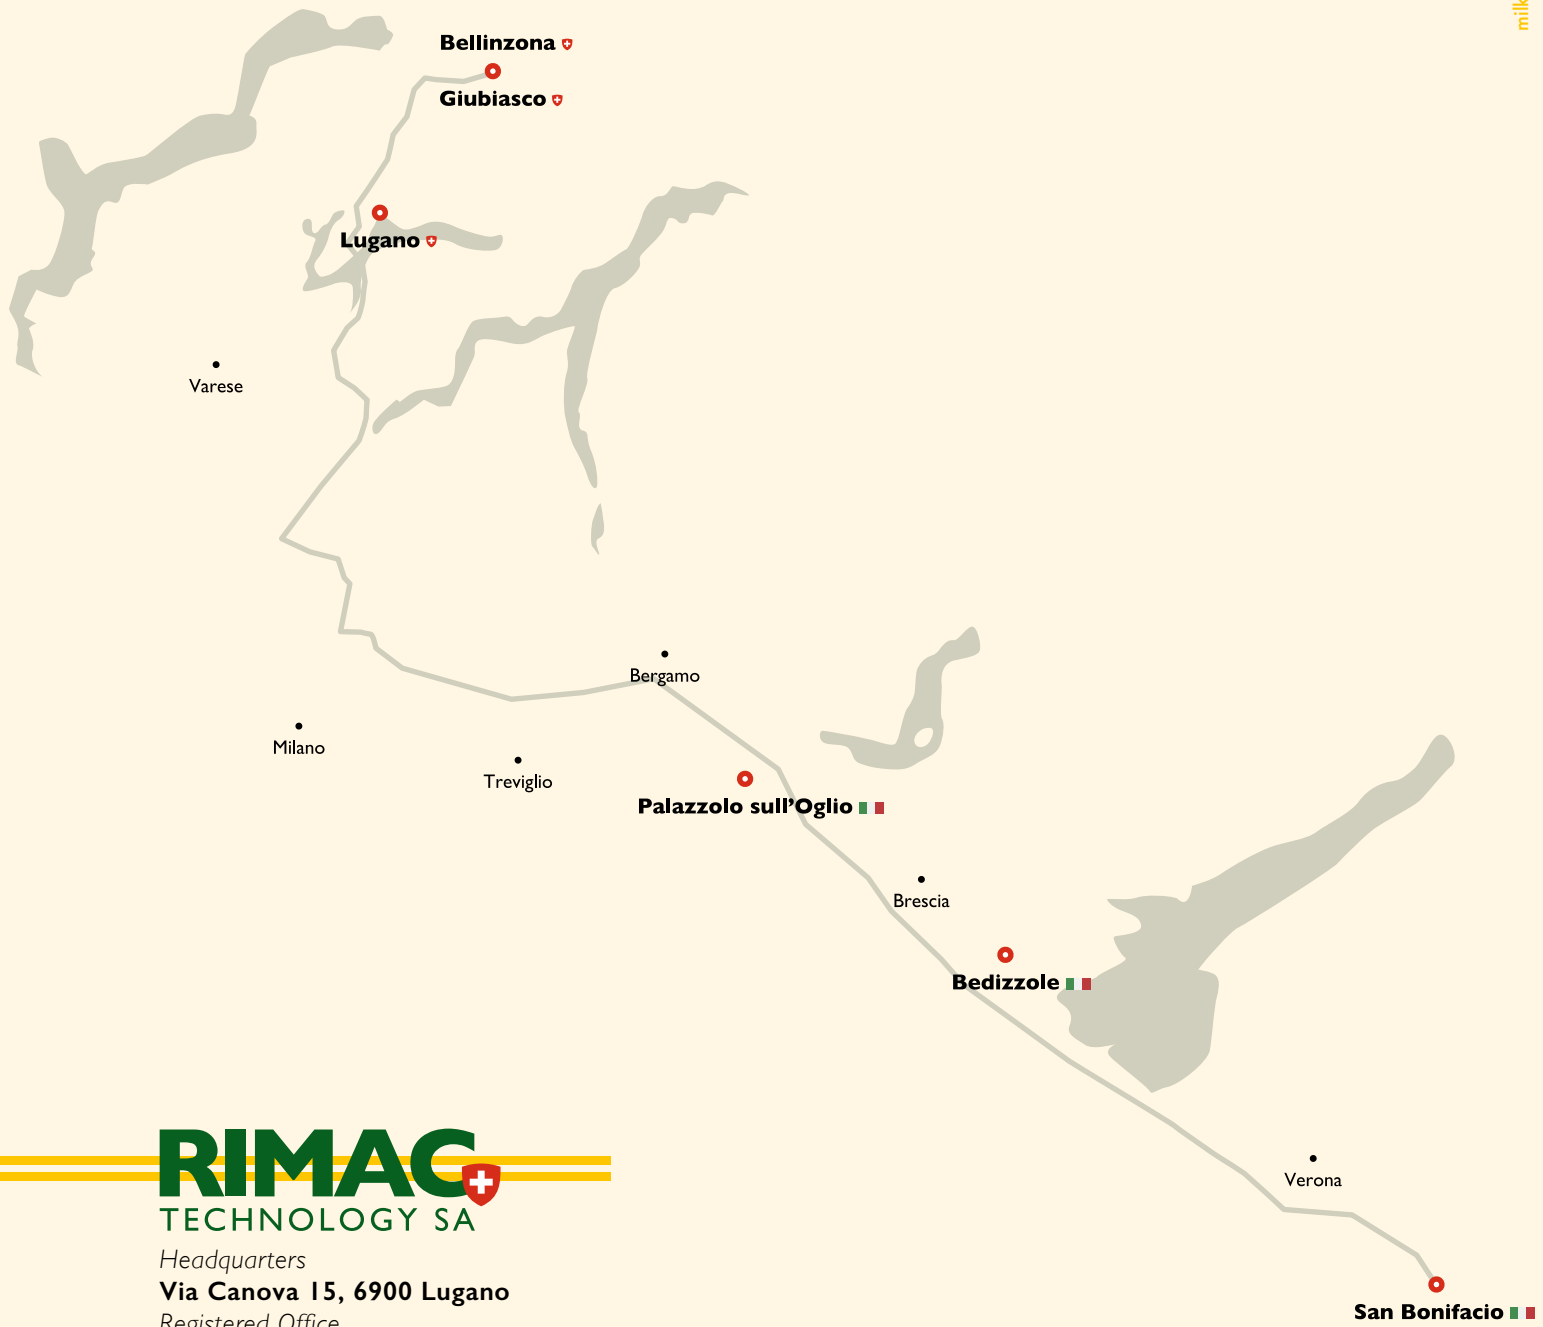

in the environmental field.

ASSISTANCE

Technical and regulatory
